Firmware: 37000-561
Version.Revision: 01.0E
Used On: DP-34044-1-200

Release Date
02 December 2020

Introduction

Update 01.0E changes the Default operation of the Sensor Output. With this release by default Sensor Outputs are turned On.

Table of Contents

Changes to 01.0E.....	3
Changes to 01.0D.....	4
Changes to 01.0Ca.....	5

Changes to 01.0E

This Update is to turn ON the Sensor Outputs by default. The discrete control of the Sensor Outputs can be enabled by configuring bit pair D7 of the Index 2000, Sub Index 2 using SDO.

Change / Function	New	Enhanced	Fixed
Sensor Power are ON by Default	✓		

Changes to 01.0D

This Update is for a Revision update on the 010Ca firmware for internal control.

Change / Function	New	Enhanced	Fixed
01.0D Release	✓		

Changes to 01.0Ca

This Firmware updates Object Dictionary to include Vendor ID, Product Name, Product Number, Revision Number and Order Code. Configuration to Enable F1, F2 and Amp Transmission is removed and can be simply transmitted using Event Timer in PDO Sub Index. The PDOs 1 to 4 which are used for Input message transmission are now transmitted on change of state by default.

This update replaces the existing 01.0C.

Change / Function	New	Enhanced	Fixed
Addition of Vendor ID	✓		
Object Dictionary update		✓	
Remove Enable F1, F2 and Amp Transmission		✓	
Input PDOs Transmission on Change of State		✓
